

I. PATIENT DEMOGRAPHIC PROFILE

PATIENT STAY ID:	39553978	ETHNICITY / RACE:	WHITE
AGE / GENDER:	52 yrs / FEMALE	INSURANCE PLAN:	Medicaid
ADMISSION TYPE:	EW EMER.	MARITAL STATUS:	WIDOWED

II. MORTALITY RISK CLINICAL ASSESSMENT (24-HOUR INTERCEPT)

42.44%

In-Hospital Mortality Risk

SEVERITY LEVEL BANDS:

CRITICAL RISK

Logistic Regression early-warning pipeline

III. DYNAMIC EXPLAINABLE AI (XAI) BEDSIDE DRIVERS

High-risk factors increasing mortality risk include Potassium (Min) (+2.9% clinical risk adjustment), Potassium (Mean) (+1.9% clinical risk adjustment), and Heart Rate (Mean) (+0.6% clinical risk adjustment). Stable physiological factors mitigating risk include Age (-2.7% clinical risk adjustment), Creatinine (Latest) (-1.6% clinical risk adjustment), and Systolic BP (Mean) (-1.0% clinical risk adjustment).

IV. ACTIONABLE CLINICAL TREATMENT ADVISORY GUIDELINES

- Renal Perfusion: Elevated Blood Urea Nitrogen (BUN) flagged. Recommend renal panel review and fluid balance indices evaluation.
- Hemodynamics: Low mean blood pressure observed. Consider arterial lines review or vasoactive perfusion support.
- Airway Status: Elevated/Depressed Respiratory Rate flagged. Evaluate bedside ventilation parameters or distress patterns.
