

I. PATIENT DEMOGRAPHIC PROFILE

PATIENT STAY ID:	STAY_TEST_999	ETHNICITY / RACE:	WHITE
AGE / GENDER:	67 yrs / MALE	INSURANCE PLAN:	Medicare
ADMISSION TYPE:	URGENT	MARITAL STATUS:	MARRIED

II. MORTALITY RISK CLINICAL ASSESSMENT (24-HOUR INTERCEPT)

19.83%

In-Hospital Mortality Risk

SEVERITY LEVEL BANDS:

MODERATE RISK

Logistic Regression early-warning pipeline

III. DYNAMIC EXPLAINABLE AI (XAI) BEDSIDE DRIVERS

The patient exhibits several high-risk telemetry and laboratory biomarkers. Most notably, an elevated Blood Urea Nitrogen (BUN) level (+0.42 SHAP) and high Heart Rate standard deviation (+0.31 SHAP) significantly push their risk score above baseline. Conversely, healthy Potassium levels (-0.12 SHAP) partially offset mortality probability.

IV. ACTIONABLE CLINICAL TREATMENT ADVISORY GUIDELINES

- High Blood Urea Nitrogen (BUN) flagged: Review renal function perfusion, verify hydration indices.
- Oxygen Saturation (SpO2) depressed (<95%): Evaluate supplementary respiratory support channels.
